

EditingTools.io announces **Live Timecode Notes Server**.

Bringing Secure, Off-Grid Note Collaboration to Live (On-Tape) Productions

Cologne, 03.11.2026

EditingTools.io, a Germany-based platform for post-production tools, announced today the upcoming release of Live Timecode Notes Server. This **new macOS application** is designed to turn any Mac into a **mobile server** for hosting Live Timecode Notes events and is intended for off-grid projects and enterprise customers.

Live Timecode Notes is an iOS and macOS application released in Spring 2025, designed for live and live-on-tape shows. It facilitates logging and collaboration within a team and offers many features, such as tags and predefined buttons. It was designed over the course of a long testing period involving over 100 productions. The app can connect to an external clock device from Tentacle Sync, and provides export options for Notes and Markers to Media Composer, Premiere Pro, Resolve and other Software formats.

The new server application is a dedicated, on-premises solution that allows production and post-production teams to run the Live Timecode Notes collaboration platform entirely within their secure local network - completely off-grid. Developed to meet the workflow demands of Productions like Reality-TV, Live Shows, Game Shows, Music Shows, Late-Night-Shows, Studio Recording, Documentaries and others, the product ensures maximum data confidentiality and reliability in any environment.

Collaboration, Uninterrupted and Local

The most sensitive productions often take place in areas with limited or no internet access, or in highly secure, air-gapped facilities. The Live Timecode Notes Server addresses this critical need by providing a local hub which can be easily and quickly be set up. It gives a team absolute control over their data, ensuring that proprietary production notes never leave the local network but still offer the live collaboration feeling.

The Live Timecode Notes Server app seamlessly integrates with the Live Timecode Notes Enterprise client application which is available for macOS and iOS, transforming secure logging into a local off-grid operation.

For now, the server will not be supported by the subscription-based app version of Live Notes and only by the Enterprise Version of the app.

Key Features

- **Complete Off-Grid Operation:** It hosts all note projects and syncs them within a local network. This feature is perfect for remote sets, secure facilities, or server room deployment in a studio.
- **Zero Client Limits:** The server allows an unlimited number of Live Timecode Notes Enterprise clients on iOS and macOS to connect simultaneously.
- **No Project Limits:** There are no limits on the number of projects that can run simultaneously.
- **API & Automation:** The server offers an open API endpoint similar to the one on the EditingTools.io API to add notes from third-party apps via cURL commands or other automation tools.
- **Universal Network Compatibility:** Supports IPv4 and IPv6 local networks for maximum compatibility with modern routers.
- **The server app can run on any MacOS 11.5+,** including the MacBook, iMac, Mac mini, and MacBook Air.
- **Port:** The server runs on port 50550 by default but the port can be freely chosen and changed.
- **Backup:** The server offers a standardised backup option for projects.
- **Perpetual license:** In line with its enterprise focus, the Server app is offered with a perpetual license, like the client. This eliminates recurring license costs and simplifies procurement.

Availability and Pre-Order Access

The Live Timecode Notes Server for macOS is slated for release in **November or December 2025**, as soon the final testing is completed.

In anticipation of the launch, EditingTools.io is offering an exclusive discounted price for the pre-order period. Interested enterprise clients are encouraged to contact the team for pre-release access and to secure pre-order pricing.
